Local Malaysian company with best selling complete clinical management software.

KUALA LUMPUR: TRM NETT SYSTEMS (M) SDN. BHD. a local Malaysian company established since 1997 has developed and successfully implemented the solution in various clinics nationwide. ClinicPlus 8.0 is a user friendly yet comprehensive clinic management system ever available in Malaysia market.

"We are not into business of selling software, we are in solutions business. The difference between software and solution are, we understand the industry better and work together with the clinics to make solution work. A successful solution is depends on people; both the clinic users and of course our people." says Dr. Urmila, CEO of NettSys.

NettSys admits that there are cheaper foreign clinical management softwares and some "me too" software products. Selecting a good solution provider & partner will ensure long term relationship , reliability & smooth operation.

Why doctors don't use computers or software : some empirical findings

KUALA LUMPUR: The attitudes of 644 practising physicians towards computer applications in medicine were studied. It indicate that physicians recognize the potential of computers. While attitudes appear to be somewhat independent of prior computer experience, they significantly affect the extent to which physicians use a computer-based information system. This may be a major reason for the slow introduction of clinical computer systems.

"Medicine is still practiced like it was 90 or 100 years ago," says study author Dr. Lawrence Casalino, "Medical care traditionally has been what your individual doctor can do in 10 to 15 minutes when you happen to show up at his or her office. If you don't come in, nothing happens."

"The industry is behind, but doctors' offices are especially behind," he says. "They have the least capital to invest on computer technology."

Most of the doctors are not laggards (people with lots of fear about the process) but just normal folks. To talk to them, they do not care if it is cool. Nor do they care if it runs on computers. And they probably have had enough hype talks to be skeptical of anything with computers.

TURN TO CLINICPLUS

" ClinicPlus is by far the most comprehensive Clinical Management & Panel Billing Software on the market to date. I have evaluated and used other application but none compares to the level of user friendliness & flexibility ClinicPlus has achieved. "

Dr. Ahmad Faizan.

Our Background

TRM NETT SYSTEMS (M) SDN. BHD. started its business operation in January 1997. Our primary focus is on development healthcare solutions. We specialize in helping clinics to fully computerize their operation. We provide our client effective & proven methods to effectively manage their clinics, increase productivity and dramatically reduce overheads and improve the bottom line. We have done abundance of knowledge transfer and experience in clinic management and panel billing into a software product to assist health service providers to manage their practice effectively. With this great tool, clinics can drastically reduce their administration hassle and dedicate their time in providing quality healthcare services.

Our Personnel

Our key personnel came from medical management expertise. TRM NETT SYSTEMS (M) SDN. BHD. is built on strong foundation of understanding the needs of the healthcare industry and technological advances. Continuing in this tradition we hired some of the best in healthcare consulting industry and systems engineer to ensure best quality from consultation, development, implementation, training and support.

Partnering with NettSys ensures you a peaceful state of mind knowing that you working with the best with people in the healthcare solutions industry. Excellent technical support and customer's satisfaction are our main driving force.

Track Records

Serving more than 300 clinics nationwide, we have proven beyond doubt our capabilities to satisfy our clients. Our commitment to excellent service, reliability of products and cost-effectiveness of our solution has enabled us to become the preferred solution providers.

Technical Information

ClinicPlus is a 32-bit client/server application with an n-tier architecture specifically designed to comply with Microsoft's DNA-M 2000 initiative. It runs as a stand alone system or on Windows network using Microsoft Access® or SQL Server® databases. This solution uses COM, ODBC, OLE/DB and ADO technologies and is fully compliant Windows . Windows Based System (Win 98, Windows NT, Windows 2000, Windows XP)

Minimum System Requirements :

Client Support: Windows 98®, Windows NT® 4.0 Service Pack 5 or higher, Windows Me®, Windows XP and Windows 2000.

Multi-user Environment: Windows 98® peer-to-peer, Windows NT 4.0 Server, Windows Me, Windows® XP, and Windows 2000® Server.

A minimum of 128 MB RAM is required, but at least 256MB is recommended. The application requires 120 MB of hard disk storage for installation. Hard disk storage requirements will increase as your database grows. As with any mission critical information routine database back-ups are strongly recommended.
